EASA AD No.: 2008-0158R2 from 12.11.2008 (TRT600)
EASA AD No.: 2008-0183 from 12.11.2008 (TRT800A and H)

Ladies and Gentlemen

We are happy that EASA has published the mentioned AD.

Please allow us to explain the final results:

1. EASA has confirmed again, that our transponders are built in accordance with the certification. Quote: Funkwerk has demonstrated (again) that the affected units fully comply with ED-73B (ETSO-2C112b) test requirements.
2. **TRT800**: The model TRT800 is no longer affected by any restrictions based on the AD
3. **TRT800A und TRT800H**: According EASA AD No. 2008-0183 with date from 12.11.2008 are those no longer restricted as long as they have modification index 10 or higher. For transponders with modification index 9 or lower we offer a free update. Please follow the instructions published in the service bulletin on our website. All new transponders have mod 10.
Please wait for an update of the respective NOTAMS in the different European countries
4. **TRT600**: According to EASA AD No. 2008-0158R2 with date from 12.11.2008 are those restricted. We offer an update of those devices to the TRT800 including all features like extended squitter and a full new 2-year warranty. Since many parts of the model TRT600 have to be replaced this modification is not free. Details can be found on our website, the corresponding Service Information Letter will be released very soon.

We kindly ask all customers to use our RMA-procedure on our website at: <http://rma.funkwerk-avionics.com>. We are prepared to process those tasks as fast as possible.

Again many thanks for all of our customers for being patient in the last weeks and the interesting discussions about mode-s-technology.

We assure you our best efforts to solve this and hope to keep you as a customer in the future.

Mit freundlichen Grüßen
Funkwerk Avionics GmbH
